

# Boost Pro

A writing and spelling practice app for children. Each task consists of a sentence, the practice word repeated, and one clear illustration.

PLATFORM

Tablet and phone, used in landscape

INTERFACE LANGUAGE

German (DE), selectable on the start screen

AUDIENCE

School years 2–4, roughly ages 7–10, and anyone practising German

INPUT

Finger or stylus handwriting

## Getting started

1. Install the app from the store listing and open it. No account or sign-in is required.
2. Allow the app to play sound on first launch. Audio reads each target word aloud.
3. Check the language badge on the start screen and change it if needed.
4. Tap **Probier's aus!** for a single sample task, or **Starten** to begin.
5. Create a jar for the child, pick a word list, and hand over the device in landscape.

Pages 6–7 — Adding a word list  
Version 1.0 · screens from the German build

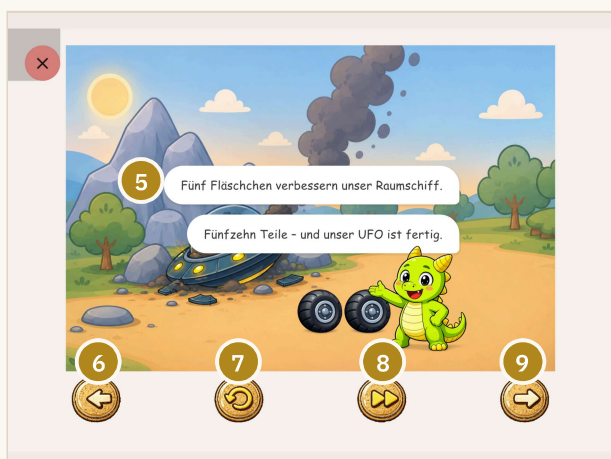

1 **Close** — leaves the app.

2 **Language** — active interface language; tap to switch.

3 **Starten** — introduction, then jar and word list.

4 **Probier's aus!** — one sample task, no session.

## Introduction

A narrated scene sets the goal: the crashed spaceship needs parts, and practice supplies them.

5 **Narration** — one line per bubble, read aloud.

6 **Back** — previous scene.

7 **Replay** — plays the narration again.

8 **Skip** — first task.

9 **Next** — advances one scene.

## Choose a jar

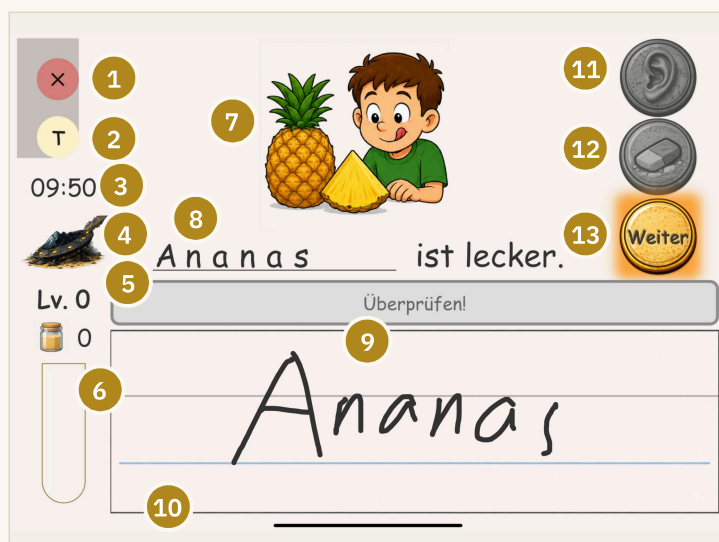

- 1 A jar holds one child's progress: name on the label, level on the lid.
- 2 Delete the jar and everything stored in it.
- 3 Add a new jar; up to three are shown.

## Choose a word list

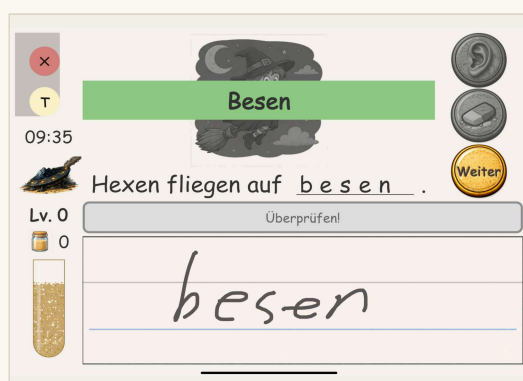

- 4 The active jar, shown as the first letter of its name. Opens that jar's practice history.
- 5 Switch to another jar.
- 6 Search word lists by title.
- 7 Refresh to pick up newly downloaded lists.
- 8 **NEU** marks the most recently downloaded list only; when another list is downloaded, the banner moves to it. The card shows its name and word count.
- 9 Options for that list. Tap the card to start.

The main working screen. The child reads the sentence, writes the missing word in the ruled field, and taps *Überprüfen!* to have it checked.

- 1 **Exit** — ends the session.
- 2 **Hint** — shows the target word.
- 3 **Time remaining** in the session.
- 4 **Repair status** of the spaceship.
- 5 **Level** of the current word set.
- 6 **Rewards** — bottles collected and the tube filling toward the next part.
- 7 **Picture prompt** for the missing word.
- 8 **Sentence with gap**; the recognised word appears in the blank.
- 9 **Überprüfen!** — checks what is written. In **word mode** the whole word is written first, then checked; in **letter mode** one letter is written and checked at a time.
- 10 **Writing field** — write between the ruled lines.
- 11 **Listen** — hear the word read aloud.
- 12 **Erase** — clears the writing field.
- 13 **Weiter** — continues after a check.

### After a wrong answer

The correct spelling appears in a green banner above the picture and the written word stays in the gap, so the two can be compared.

Each word allows three attempts: tap **Weiter** to try again; after the third the app moves to the next word.

## Level up

Correct answers fill the reward tube. Once it is full, the level goes up: the guide character appears with the repaired spaceship and the collected bottles are spent on it. The **Weiter** button at the bottom right returns to practice.

## Session result

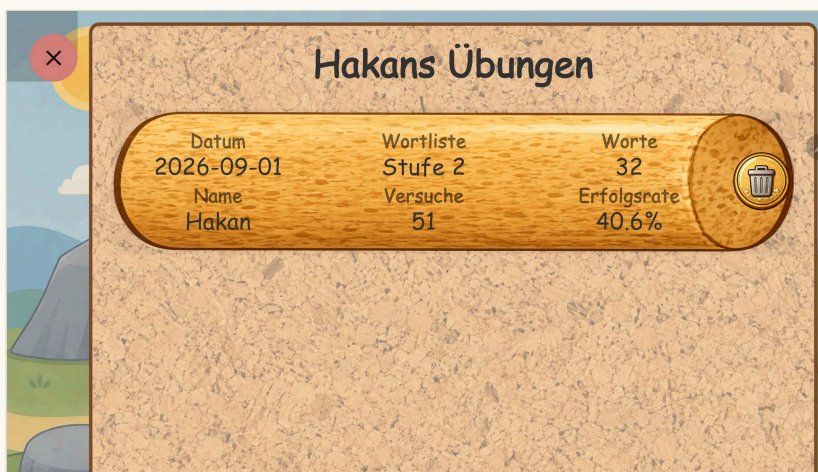

**Richtig** — words answered correctly out of the words practised.

**Erfolgsrate** — success rate for the session.

**Am häufigsten falsch** — the error types that came up most, such as word stems and endings or short and long vowels.

**Nochmal** repeats the same list; **Weiter** returns to the word lists.

## Practice history

Each jar keeps its own log, titled with the child's name, with one row per session: the list practised, the date, and the score. Reached from the jar button in the side rail of the word list screen.

## Add a list

Tap the + card in the word list grid.

**Wortliste hinzufügen** offers two ways in:

**Importieren** — opens the device's file browser. Pick a **.bst** file you downloaded or received from someone else and it is imported as a word list.

**Neue Liste** — build a list from scratch.

## The word table

- 1 One row per word: **Wort**, **Satz**, **Bild** and **Sprache** — **TTS** for generated speech, **Files** for a supplied audio file. Tap a row to edit it.
- 2 **DE / EN** — the language of the list. It switches the TTS voice and marks the list as English; switch it here when creating an English word list.
- 3 + adds a row.
- 4 **Speichern als** — save under a new name.
- 5 **Speichern** — save the list.
- 6 **Details** — title and cover of the list.

## One word

- 7 **Wort** — required; becomes the gap during practice.
- 8 **Satz** — required; the word is highlighted inside it.
- 9 Play — checks the audio.
- 10 Microphone — records the word in your own voice and saves it as the entry's audio file.
- 11 **Audio-Datei wählen** — loads an existing audio file. With none chosen, the app generates the speech itself, which can sound noticeably poorer.
- 12 **Bild** — image of the word.

## Title and cover

The screenshot shows a form titled 'Ersteller\*' with three input fields: 'hwa' for the title, 'Obst' for the title, and 'Süße Obstsorten' for the description. To the right, under the 'Bild' tab, is a preview of a fruit basket image. Below the preview, it says 'pd\_31847.jpg' and 'Die Bild-Datei wurde separat gespeichert:'. At the bottom, there are two buttons: 'Abbrechen' and 'Weiter'. A small note at the bottom left says '\* benötigt für einen Eintrag'.

**Ersteller**, **Titel** and **Beschreibung** are required. The title is what the card shows in the grid.

**Bild** sets the cover picture. **Weiter** returns to the table, where **Speichern** saves the list.

## The finished list

The new list joins the grid with its cover, title and word count, and can be practised like any other.

## Edit, share, delete

The **:** button on a card opens its options.

**Bearbeiten** reopens the word table, **Teilen** sends the list to someone else, **Löschen** removes it.
